

Data Flow Diagram

Date	28 June 2026
Team ID	
Project Name	Rising Waters
Maximum Marks	2 Marks

Data Flow Diagram

Create a Data Flow Diagram (DFD) to show how data moves through your system - between external entities, processes, and data stores.

**Data Flow Diagram – AIML–RisingWaters
(Flood Prediction Using Machine Learning)**

Note:
The system takes weather and location inputs from the user, processes the data, uses a trained ML model to predict flood risk, and returns the results / alerts to the user.

Data Flows

- User → Input Validation: **Location & Weather Parameters**
- Input Validation → Weather Data Repository: **Validated Input**
- Repository → ML Prediction: **Historical Weather Data**
- ML Model → Flood Risk Result: **Prediction Score**
- Flood Risk Result → User: **Flood Alert / Safe Status**
